

Credit Name: Object Oriented Programming2

Assignment Name: UEmployee

ERROR LOG

Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?

I was receiving an error for public class. I had to fix it to match the file name and moved the "extend" class a line under to help fix my error.

```
public class Staff extends UEmployee {  
    private String jobTitle;  
  
    public Staff(String name, double salary, String jobTitle) {  
        super(name, salary);  
        this.jobTitle = jobTitle;  
    }  
  
    public String getJobTitle() {  
        return jobTitle;  
    }  
}
```
