

ERROR LOG

Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?

The error I was encountering in my Reverse Code assignment is not including the While statement for my integers. My output is shown in the screenshots below. When I added the While statement, the code was more smooth and completed the instructions.

```
public class ReverseList
{
    public static void main(String[] args)
    {
        Stack<Integer> stack = new Stack<>();
        Scanner scanner = new Scanner(System.in);
        int count = 0;
        int maxNumbers = 10;

        System.out.print("The list reversed is: ");
        while (!stack.isEmpty())
        {
            System.out.print(stack.pop() + " ")
        }

        scanner.close();
    }
}
```

The list reversed is:
