

REFLECTION ON CODE

How has your program changed from planning to coding to now? Please Explain?

My Metric Conversion code was an easy code to create because it was similar to the skill builder but adding a few touches. I learned that the different “import java.util. (...)” play an impact in the code as their differences have different meanings. For Metric Conversion, I used “`javax.swing.*`” because it helps to provide a connection that helps enable the input of methods development that is used. I tried to apply my knowledge from all computer science level as my personal level of coding to create a proper code.
