Credit Name: Computer Science 3
Assignment Name: Metric Conversion

ERROR LOG

<u>Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?</u>

I was getting an error because I didn't import correctly. I had to change it for my code to correctly work.
"**import** javax.swing.*;
import java.awt.*;
import java.awt.event.*;"

```java
public class MetricConversion extends JFrame {
    private JComboBox<String> conversionBox;
    private JLabel formulaLabel;

    public MetricConversion() {
        setTitle("Metric Conversion");
        setSize(300, 150);
        setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
        setLayout(new FlowLayout());
```
